Ayoub Janina

Data Engineering & Full-Stack Developer

Data Software Engineering student passionate about building data pipelines, computer vision systems, and full-stack web applications. I develop end-to-end solutions that extract, process, and visualize data efficiently. I enjoy solving complex problems and turning ideas into practical, scalable systems.

Education

MASTER DEGREE IN DATA AND SOFTWARE ENGINEERING

Since September 2025 **INSEA** Rabat, Morocco

Engineering program focused on data analysis, software development, and statistical modeling, with strong foundations in mathematics and computer science.

BACHELOR OF SCIENCE IN MATHEMATICAL SCIENCES

From 2022 to 2023 **Tariq Ibno Ziad** Casablanca, Morocco

Developed a strong foundation in mathematics, statistics, and analytical problem-solving. Gained skills in logical reasoning, modeling, and quantitative analysis applicable to data engineering and complex systems.

CPGE CLASSES

From September 2023 to June 2025 **Mohammed V** Casablanca, Morocco

Preparatory Classes (Mathematics & Physics – MP)

Projects

Web Development Project – Educational Platform

From 2025 to 2026 **Academic Project** Morocco

- Developed an educational website using HTML, CSS, and PHP
- Designed and structured a relational database (SQL)
- Implemented backend functionalities and user interaction
- Focused on usability and structured content delivery

Full-Stack Web Development Project

From 2025 to 2026 **Personal Project** Morocco

- Developed a GPS-based web application using JavaScript and Firebase
- Implemented real-time geolocation tracking
- Built user authentication and secure backend integration
- Managed application state and data persistence

Data Cleaning & Preprocessing Project

From 2025 to 2026 **Personal Project** Morocco

- Cleaned and preprocessed datasets using Python (Pandas)
- Handled missing values, duplicates, and inconsistencies
- Prepared data for analysis and machine learning
- Improved data quality and reliability

Computer Vision & Data Engineering Project

From 2025 to 2026 **Personal Project** Morocco

- Developed a football analysis system using computer vision (YOLO, OpenCV)
- Detected players and key actions from video data
- Processed and analyzed data to extract performance insights
- Built dashboards for data visualization and analysis

Certifications

Data Engineer Associate

From February 2026 to February 2028 **DataCamp** Online

- Demonstrated knowledge of data engineering concepts (ETL, data pipelines)
- Worked with SQL and data modeling techniques
- Managed and transformed structured and unstructured data

Database Programming with SQL

February 2026 **Oracle Academy** Rabat, Morocco

- Completed SQL training as part of academic coursework
- Learned relational database design and query writing
- Applied SQL in practical academic projects

Fundamentals of Deep Learning

December 2025 **NVIDIA Deep Learning Institute** Online

- Learned fundamentals of deep learning and neural networks
- Applied GPU-accelerated workflows
- Built basic deep learning models
