ABOUT ME

Data Software Engineering student passionate about building data pipelines, computer vision systems, and full-stack web applications. I develop end-to-end solutions that extract, process, and visualize data efficiently. I enjoy solving complex problems and turning ideas into practical, scalable systems.

EDUCATION

2022-2023

BACHELOR OF SCIENCE IN MATHEMATICAL SCIENCES

Developed a strong foundation in mathematics, statistics, and analytical problem-solving. Gained skills in logical reasoning, modeling, and quantitative analysis applicable to data engineering and complex systems.

2023-2025

CPGE LYCÉE MOHAMED V CASABLANCA

Preparatory Classes (Mathematics & Physics – MP)

PROJECTS

GPS TREASURE HUNT APP

Real-time web app with Firebase and geolocation

Tech: JavaScript, Firebase

FOOTBALL PLAYER CHEMISTRY ANALYSIS

Computer vision pipeline for football analytics

Tech: Python, OpenCV, YOLO, Streamlit

WORK EXPERIENCE

2025-2026

COMPUTER VISION & DATA ENGINEERING DEVELOPER

Developed an end-to-end football analysis system using computer vision (YOLO, OpenCV) to track players, detect passes, and compute player chemistry. Built dashboards and visual analytics.

2026

FULL-STACK DEVELOPER

Built a real-time GPS-based web application using JavaScript and Firebase with secure backend integration, geolocation tracking, and persistent state management.

SKILLS

- Python
- Data Engineering
- Web Scraping
- JavaScript
- Firebase
- Computer Vision
- ETL / Data Pipelines
- APIs
